INSULATION BLOWING MACHINES – SERIES 700

Insulation Blower - SERIES 700 Reliable Hydraulic Power On The Industry's Most Versatile Platform

The SERIES 700 insulation blower is the next generation in high performance blowing machines:

- Powerful enough for open blow
- Precise enough for sidewall fill
- Versatile enough for wall spray, "netted" cavity or stabilized applications

Totally Hydraulic Drive System

The SERIES 700 features a totally hydraulic drive system providing power to the blower, feeder and hopper. The new variable speed blower control allows the operator to control air volume while maintaining a constant delivery pressure. With Meyer's hydraulic design, there are no more clutches, transmissions and the associated chains, belts and pulleys. Our innovative design simplifies installation, providing exceptional operating performance and reliability while requiring minimal maintenance.

Quick-Change Seal Strip System - Simplified Operation - Minimized Downtime

Smart engineering simplifies operation, minimizes downtime and delivers accurate and uniform coverage. Meyer's exclusive quick-change seal strip system lets you replace seal strips in the feeder in minutes. The infinitely adjustable hopper speed control provides precise control of hopper conditioning speed, and the electrically operated material slide gate is panel mounted for easy adjustment. All gauges and controls are easily accessible without having to remove protective safety guards.

Insulation blowing professionals can choose from the SERIES 700's two drive train options to suit specific needs and preferences:

- Hydraulic power-take-off
- Water cooled gas engine

The SERIES 700 represents Meyer's total commitment to the highest standards of quality, craftsmanship and customer service. Backed by the most comprehensive 2-year warranty in the industry, the SERIES 700 will serve the professional applicator for years to come.

PRODUCT SPECIFICATIONS

702

705A

	702	705A
Power Source	Hydraulic Power-Take-Off	2 Cylinder, Water Cooled Gas Engine
Length	75"	75"
Width	38"	38"
Height	72"	72"
Weight	1400 lbs.	1700 lbs.

Features & Advantages

Weight loaded pressure relief valve

Infinitely variable air volume valve

Maintenance free agitator arm/pad assembly

Welded 4" structural I-Beam base

High precision, robotically welded components

Laser cut, CNC punched heavy gauge steel plate

Severe service drive train

Large diameter, high grade shafting

200' 3-way remote control cord (available with optional radio remote)

Stainless steel hinges and fasteners

Powder coated finish

Precision machined rotary airlock feeder

Lubricated-for-life bearings

Automatic back pressure check valve

Heavy duty chains and sprockets

High pressure hydraulic torque protection

Automatic hydraulic high temperature shutoff

Fully guarded drive/power train

Low oil shut-off (engine drive models)
